Education

Indian Institute of Information Technology, Nagpur (IIITN)

Nov 2022 - Present

BTech. in Computer Science with specialization in Artificial intelligence and Machine Learning (CGPA :7.33) Nagpur , Maharashtra

- **Relevant Coursework:** Artificial Intelligence, Machine Learning, Conversational AI, Computer Programming, Data Structures, Application Programming, Introduction to Object Oriented Programming, Design and Analysis of Algorithms, Software Engineering, Operating Systems, Database Management Systems, Calculus for Data Science, Probability and Statistics, Introduction to Linear Algebra, AI/ML Workshop-I, AI/ML Workshop-II.

Technical Skills

Languages: C, C++, Python,

Technologies: TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib, Power BI

Concepts: Exploratory Data Analysis (EDA), Data Preprocessing, Data Visualization, Predictive Modeling, Hyperparameter Tuning, Model Evaluation, Time Series Forecasting, Neural Networks (LSTM, MLP), Machine Learning Algorithms (KNN)

Experience

Student Placement Cell

Jan 2024 - Present

Networking Team

Nagpur, Maharashtra

- **Establish Industry Relationships:** Build and maintain strong connections with companies and industry professionals to facilitate campus recruitment drives.
- **Alumni Engagement:** Create and nurture a network of alumni, organizing events like webinars and mentorship programs to leverage their industry experience for student benefit.
- **Disseminate Information:** Provide students with regular updates on job openings, internships, and industry trends through newsletters, social media, and placement portals.

Projects

Epileptic Seizure Detection Using Machine Learning | Python, Scikit-learn, TensorFlow, Keras, NumPy, Pandas, Matplotlib.

- Developed a machine learning model in Python using TensorFlow and Keras to predict epileptic seizures from EEG data.
- Achieved 71% accuracy with a Multilayer Perceptron (MLP) classifier, demonstrating strong proficiency in model selection, training, and evaluation.
- Conducted extensive data preprocessing, feature scaling, and hyperparameter tuning to optimize model performance using Scikit-learn.
- Created visualizations of model performance and hyperparameter tuning results using Matplotlib, providing clear insights for further analysis and improvement.

Deep Learning Stock Price Prediction Using LSTM Neural Networks | Python, Scikit-learn, TensorFlow, Keras, NumPy, Pandas

- Developed a Long Short-Term Memory (LSTM) based stock price prediction model using TensorFlow and Keras in Python.
- Trained the LSTM model with 100 epochs and a batch size of 64, optimizing it with the Adam optimizer and a mean squared error loss function.
- Predicted stock closing prices for the given data and forecasted prices for the next 10 days, achieving a root mean squared error (RMSE) of 140.99 on the training set and 235.72 on the test set.
- Implemented data preprocessing techniques and evaluated model performance using mathematical metrics such as RMSE to assess accuracy and effectiveness.

Road Traffic Accidents Analysis and Visualization | Python (Pandas, Matplotlib, Seaborn), Power BI

- Utilized Python (Pandas, Matplotlib) and Power BI to perform exploratory data analysis and create interactive visualizations for a comprehensive understanding of accident patterns and trends.
- Efficiently handled missing data, validated data quality, and normalized numerical data to ensure accurate analysis.
- Identified key risk factors and patterns to inform traffic safety improvements, policy development, and driver awareness initiatives.
